Aman Verma

Jaunpur, UP, India | +91 6386617608 | akverma4aman@gmail.com | linkedin.com/in/amanverma765 | github.com/amanverma-765

Technical Skills

Languages & Core: Python, Java, SQL, Bash, DSA, OOP, DBMS, Operating Systems
AI & Agent Frameworks: Pydantic AI, Model Context Protocol (MCP), LangGraph, LangChain, LlamaIndex, Ollama, Google ADK
Backend Frameworks: FastAPI, Celery, Asyncio, SQLAlchemy, Alembic, Nginx, REST APIs
Databases & Vector Stores: PostgreSQL, Redis, ChromaDB, SQLite (WAL)
Web Scraping & Automation: Selectolax, BeautifulSoup4, httpx, Playwright, Selenium, curl-cffi
Evals & Observability: OpenTelemetry, Langfuse, Logfire, Ragas, Pytest
Developer Tools & DevOps: Docker, Git, GitHub Actions, Postman, Linux, uv, Ruff

Experience

Software Engineer Intern January 2026 – June 2026
LexoLegal *Remote*

- Architected asynchronous REST APIs in **FastAPI**, **SQLAlchemy 2.0**, and **PostgreSQL** behind an **Nginx** reverse proxy, implementing multi-tier JWT authentication, RFC 9457 standardized problem details, and **Alembic** schema migrations.
- Built and deployed 'Munshi', an autonomous legal assistant using **Pydantic AI** and **FastAPI**, resolving multi-turn case inquiries over WhatsApp with **sub-2s latency** via tool-calling execution loops.
- Integrated **Model Context Protocol (MCP)** clients with **Pydantic AI** to interface Google Drive and Google Calendar tool servers, orchestrating legal brief retrieval and hearing scheduling within authenticated sessions.
- Eliminated cross-tenant prompt injection risks by isolating verified user identity inside **Pydantic AI** AgentDeps rather than LLM tool parameters, hard-bounding agent access to sandboxed workspace tools.
- Prevented race conditions and dropped turns from rapid WhatsApp messages by designing **Celery** workers with atomic **Redis** distributed locks and non-blocking 10s countdown task requeues (90-retry ceiling).
- Automated daily judicial data ingestion across all 25 High Courts and 743 District Courts via **Celery** workers with **Selectolax** DOM extractors and **PostgreSQL** batch inserts to keep agent case records synchronized.

Projects

ncert-rag-evals | *Python 3.14, uv, SQLite FTS5, ChromaDB, Pytest* Sept. 2024 – Present

- Constructed an empirical retrieval benchmark across 17 STEM textbooks, implementing custom hybrid search from scratch in **SQLite FTS5** and **ChromaDB** instead of high-level LlamaIndex abstractions to profile 8 retrieval strategies on raw CPU latency.
- Proved that fusing BM25 with dense embeddings via Reciprocal Rank Fusion (RRF) achieved **86.9% Recall@5 in 8.9ms on CPU**, matching LLM query expansion while cutting latency by **99.8%**.
- Engineered a document parser indexing 4,429 section-aware chunks into **SQLite FTS5** and **ChromaDB**; validated statistical significance via paired McNemar tests ($\mathbf{p = 0.0021}$) and 92 unit tests.

doubtless | *Pydantic AI, FastAPI, Multimodal RAG, Groq Whisper, Celery, Redis, Logfire* Jan. 2024 – May 2024

- Engineered an interactive lecture doubt-solver and AI study workspace in **Pydantic AI** and **FastAPI**, fusing blackboard video frames with 45s playback dialogue windows to stream real-time solutions for visual STEM queries via SSE.
- Designed an asynchronous 4-stage media ingestion pipeline (PipelineRunner) in **Celery** and **Redis** that transcodes HLS streams, slices 16kHz mono audio (<15MB/hr), and transcribes lectures in <10s via **Groq Whisper-Large-V3**.
- Architected the async data layer with thread-safe **SQLite WAL** repositories and **Redis** to serve concurrent agent queries; containerized services and instrumented distributed tracing across agent runs via **OpenTelemetry** and **Logfire** (151 tests).

vectorless-rag | *Python, Pydantic AI, Ollama, ChromaDB, PyMuPDF* Oct. 2024 – Nov. 2024

- Evaluated dense vector search against LLM-based page indexing on an identical document corpus using **Pydantic AI**, configuring **Ollama** as a local testbed alongside cloud LLMs across 18 benchmark queries.
- Benchmarked retrieval trade-offs: generative page indexing achieved **100% retrieval hit rate** and **0.85 citation precision** (vs 93% and 0.69 for vector RAG), while quantifying the 2.7x token cost and 2x latency tradeoff.

Leadership & Activities

- Delivered 3 technical sessions as a speaker on 'Generative AI Unlocked: LLM Basics' and 'Level Up Your Career with AI', training 150+ college students on foundational LLM concepts and modern AI developer tools.
- Coordinated placement drives and corporate outreach at CTPC (Central Training & Placement Cell), managing logistics and interview scheduling for recruiters and 100+ candidates.
- Organized Smart India Hackathon internal rounds across 2 editions; coordinated problem statement curation, mentoring, and judging logistics for 20+ teams and 120+ participants.

Education

Veer Bahadur Singh Purvanchal University 2023 – 2027
Bachelor of Technology in Computer Science & Engineering *Jaunpur, India*
